- Developed APIs using .NET Core 7 and Entity Framework Core.
- Utilised advanced design patterns including the Repository, Service, Dependency Injection, and Unit of Work patterns.
- Implemented authentication and authorization with JWT (JSON Web Tokens), leveraging the Microsoft Identity package for user management.
- Configured Swagger for API documentation to streamline the process.
- Implemented a global exception handler to manage application errors and exceptions effectively.
- Seeded initial data into the database upon application startup.

Note: I only had two days to work on this application because I found the email in my spam folder. I did my best to complete most of the requirements you gave, but I haven't had time to write test cases for it yet.
